ABSTRACT

Prepared to assist in decision making regarding the programs, courses, and services offered by Saddleback College, California, this report presents current and projected population data for Orange County and the Saddleback Community College District (SCCD); present and projected college enrollment and weekly student contact hours (WSCH); and projected construction of single and multiple family units within the geographic boundaries of the SCCD. Following introductory material which discusses the effects of an anticipated increase in population in southern Orange County on enrollment in the district, the report provides information on the county population and its projected growth. The next sections look at the projected population of Orange County by age ranges, and of selected community analysis areas. Next, enrollment projections indicate that enrollment and WSCH at Saddleback College are both expected to gradually increase through 1993. Tables trace actual and projected enrollments from 1975 through 1993, focusing on day credit, evening credit, non-credit, and total enrollment and WSCH. Expectations regarding construction and housing in the SCCD are discussed next, followed by data on fall 1984 enrollments at Saddleback College. Appendices provide additional information on housing construction and fall 1984 enrollments at Saddleback College. (AYC)

Abstract

Selected demographic data related to Orange County and the Saddleback Community College District were gathered to assist those individuals concerned with making decisions regarding the programs, courses, and services offered by Saddleback College.

The data presented in this report include present (fall 1984) and projected total County and District population, present and projected College enrollment and WSCH, and projected construction of single family and multiple family units within the geographic boundary of the District.

Introduction

During the next twenty years, enrollment in most community colleges--and in higher education in general--is expected to decline, or at best to stabilize due to a significant decrease in the number of college-age students. Though a decline in overall enrollment in the Saddleback Community College District seems unlikely because of the ever-increasing growth in the population of southern Orange County, nevertheless, in a time when the basis for funding community colleges is under scrutiny by the Governor and Legislature, dramatic funding changes could be enacted that would significantly influence the nature and scope of College programs and courses.

The projected increase in population in southern Orange County could counterbalance the effects of any significant decrease in enrollment, though it is presently impossible to predict with any certainty how any specific factor would affect enrollment. But even if there is no decline in enrollment at Saddleback College, changes in how community colleges in California are funded may be forthcoming. Other factors could also emerge. For example, if the number of students in younger age ranges were to decrease sharply, the District would experience financial consequences.

To plan effectively and to establish clear priorities for

Saddleback College, it is important for those people concerned with making decisions regarding programs, courses, and services to be familiar to some extent with demographic data related to Orange County in general and to Saddleback College in particular. The data included in this report have been taken from many sources. Those sources have been cited whenever possible.

Population of Orange County

The population of Orange County (see Figure 1) reached 1.9 million people in 1980, an increase of 512,323 residents since 1970. A population of 2.3 million is expected by 1990, increasing to 2.6 million by 2000 (see Figure 2).

The fastest growing area is the southern part of Orange County. Increases in this area accounted for more than half the county's growth in population between 1970 and 1980. The development of this area will continue, though population growth will not likely be as rapid as previously projected. In fact, according to William Gayk, Chief Demographer, Orange County, the projected population of Orange County has been revised downward somewhat the past several years.

Projected Population of Orange County by Age Ranges

The projected population of Orange County by age ranges is presented in Table 1. Between 1980 and 1990, marked increases in population are expected in the following age ranges: 5-9, 30-34, 35-39, 40-44, 45-49, and 65+. On the other hand, marked decreases in population will likely occur in the 15-19 and 20-24 age ranges. This latter trend is of concern to Saddleback College: approximately 35 percent of the students enrolled during the fall 1984 semester were between ages 15 and 24 (see Tables 2, 3, and 4). These students, however, generated nearly 55 percent of the College's WSCH.

Column Total	862	15,704	684	17,250*

*Age data for one hundred twenty-five (125) students were unavailable.

The number of people in Orange County in the 15-19 and 20-24 age ranges is expected to continue to decline until 1990; then it is expected that these ranges will stablize through 1995 before increasing (see Figure 3).

No significant change is expected in the number of people in Orange County in the age range 25-29 though 1990; the number then is expected to decline until the year 2000 before increasing.

Finally, the number of people in Orange County in the 20-24 age range is expected to decline though 1995 before stabilizing.

By far the most dramatic change in the nature of the population of Orange County occurs in the 65+ age range. Between 1985 and 1995, an increase of approximately 100,000 people is expected in this category (see Figure 4).

Projected Population of Selected Community Analysis Areas

The geographic area comprising the Saddleback Community College District (see Figure 5) closely approximates the community analysis areas depicted in Figures 6 and 7 and listed in Table 5. The projected population through the year 2000 of those community analysis areas that correspond to the geographic area of the District is presented in Table 5. (A community analysis area is the basic government unit used for projecting population in Orange County. In addition, the same unit is used by governmental and other agencies in planning efforts and when classifying collected data.)

Source: Orange County Administrative Office (11-82).

The population of residents living within the aforementioned community analysis areas is expected to continue to increase through 2000 (see Figure 8), reaching approximately 670,000 by 1995, a projected increase of nearly 200,000 since 1985. Furthermore, the projected percentage of Orange County's population residing within the District will continue to increase (see Figure 9).

Community analysis areas have been designated as north and south areas based on fall 1984 enrollment at Saddleback College. To illustrate, if the majority of students living within community analysis area 42 were attending Saddleback College North in Irvine, that community analysis area was classified as north. This division of students according to community analysis areas neither equally distributes the present enrollment between Saddleback College North and Saddleback College South nor the geographic area within the District nor the population residing within the Disrict's service area. Seventy-five (75) percent of the students enrolled at Saddleback College during the fall 1984 semester attended Saddleback College South; twenty (20) percent attended Saddleback College North. Five (5) percent attended both campuses.

FIGURE 8

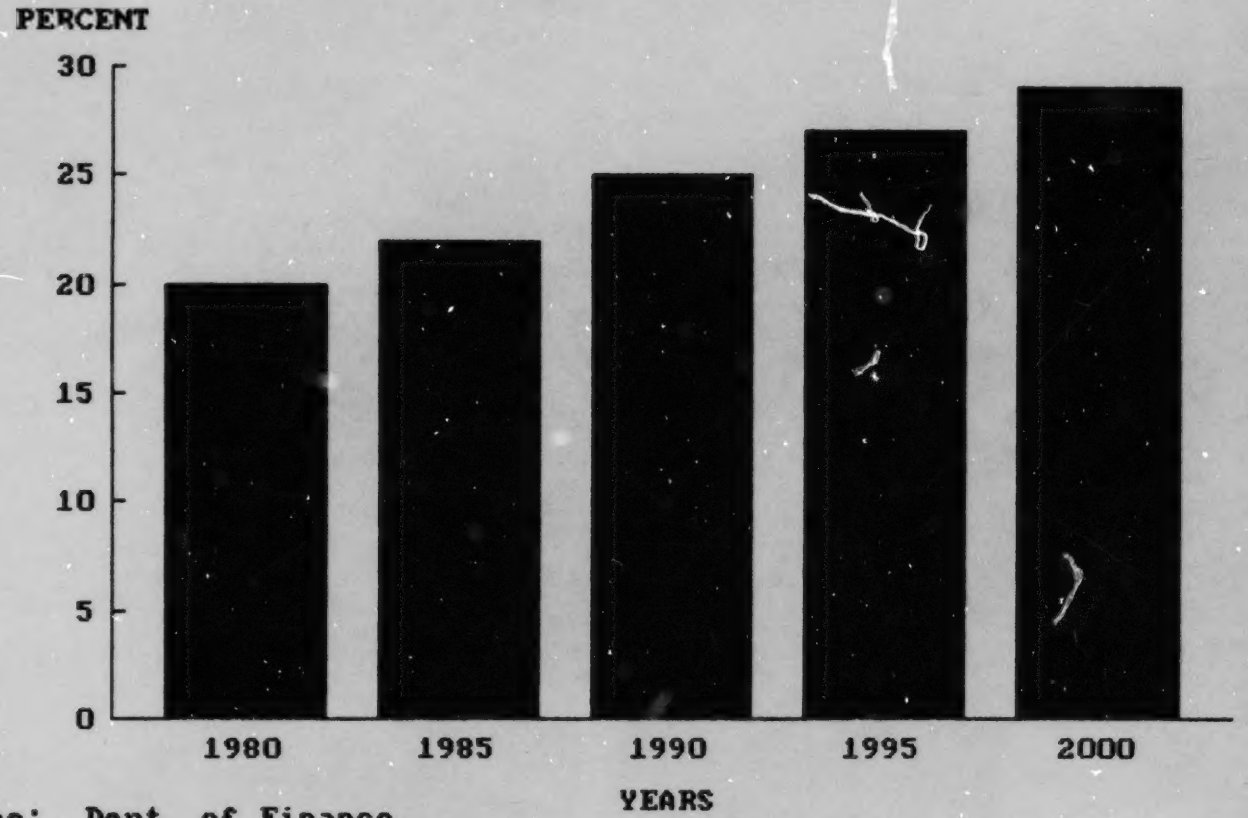
Administrative Office,
November 1982

FIGURE 9

SADDLEBACK COMMUNITY COLLEGE DISTRICT:
PROJECTED PERCENTAGE OF COUNTY POPULATION
RESIDING WITHIN THE DISTRICT



Source: Dept. of Finance,
State of California,
1983

The number of residents living within the north and south areas is expected to increase (see Table 5 and Figure 10). By 1995 it is expected that the population of the north area as presently defined will be approximately 265,000; the population of the south area as presently defined will likely exceed 400,000. Together these figures represent a population increase in the north and south areas of approximately 280,000 since 1982.

By 1985 and then for the foreseeable future, the projected percentages of the District's population residing within the north and south areas will likely stabilize (see Figure 11). Close to sixty (60) percent of this population will reside within the south area, and forty (40) percent will live within the north area.

If attendance patterns change, however, the north and south areas could be redefined. For example, if the majority of students living within community analysis areas 56 (Saddleback) and 57 (El Toro) attend Saddleback College North instead of Saddleback College South, the projected percentages of the District's population residing within the north and south areas would markedly change (see Figure 12). If this occurs the District's population would be nearly equally distributed between the north and south areas (see Figure 13).

Projected Enrollment at Saddleback College

Enrollment at Saddleback College is expected to gradually increase through 1993 (see Figure 12). In addition, the WSCH generated by students enrolled is also expected to increase (see Table 6.) In fact, the projected fall 1984 enrollment of 23,060 was less than the actual enrollment of 23,240. The projected WSCH of 200,800, however, was considerably more than the actual WSCH of 172,507. Thus, when comparing fall 1984 enrollment with fall 1983 enrollment, approximately the same number of students were enrolled in fewer classes.

Projected Number of Single Family and Multiple Family Units

Through the year 2000, construction of single family (six or fewer units per acre) and multiple family units (seven or more units per acre) in community analysis areas within the geographic boundary of the Saddleback Community College District is expected to steadily increase (see Table 7). Between 1985 and 1995, construction of approximately 28,000 single family units and 41,000 multiple family units is expected (see Figure 13). In the north area, construction of at least 3,000 single family units is expected in the following community analysis areas: 43 (Tustin Hills), 50 (Irvine), and 52 (Irvine). Figures depicting the fastest growing community analysis areas in the north and south areas are found in Appendix A. By the same year in the south area, construction of at least 5,000 single family units is expected in the following community analysis areas: 59 (South County) and 64 (Laguna Niguel). Construction of approximately 3,000 single family units is expected in community analysis area 69 (San Clemente).

By the year 2000, the construction of multiple family units is also expected to increase. In the north area, 3,000 units are expected in community analysis area 50 (Irvine), 8,000 units in area 51 (Irvine), and 10,000 units in area 52 (Irvine). In the south area, construction of nearly 5,000 multiple family units is expected in area 58 (Mission Viejo) and in area 59 (South County).

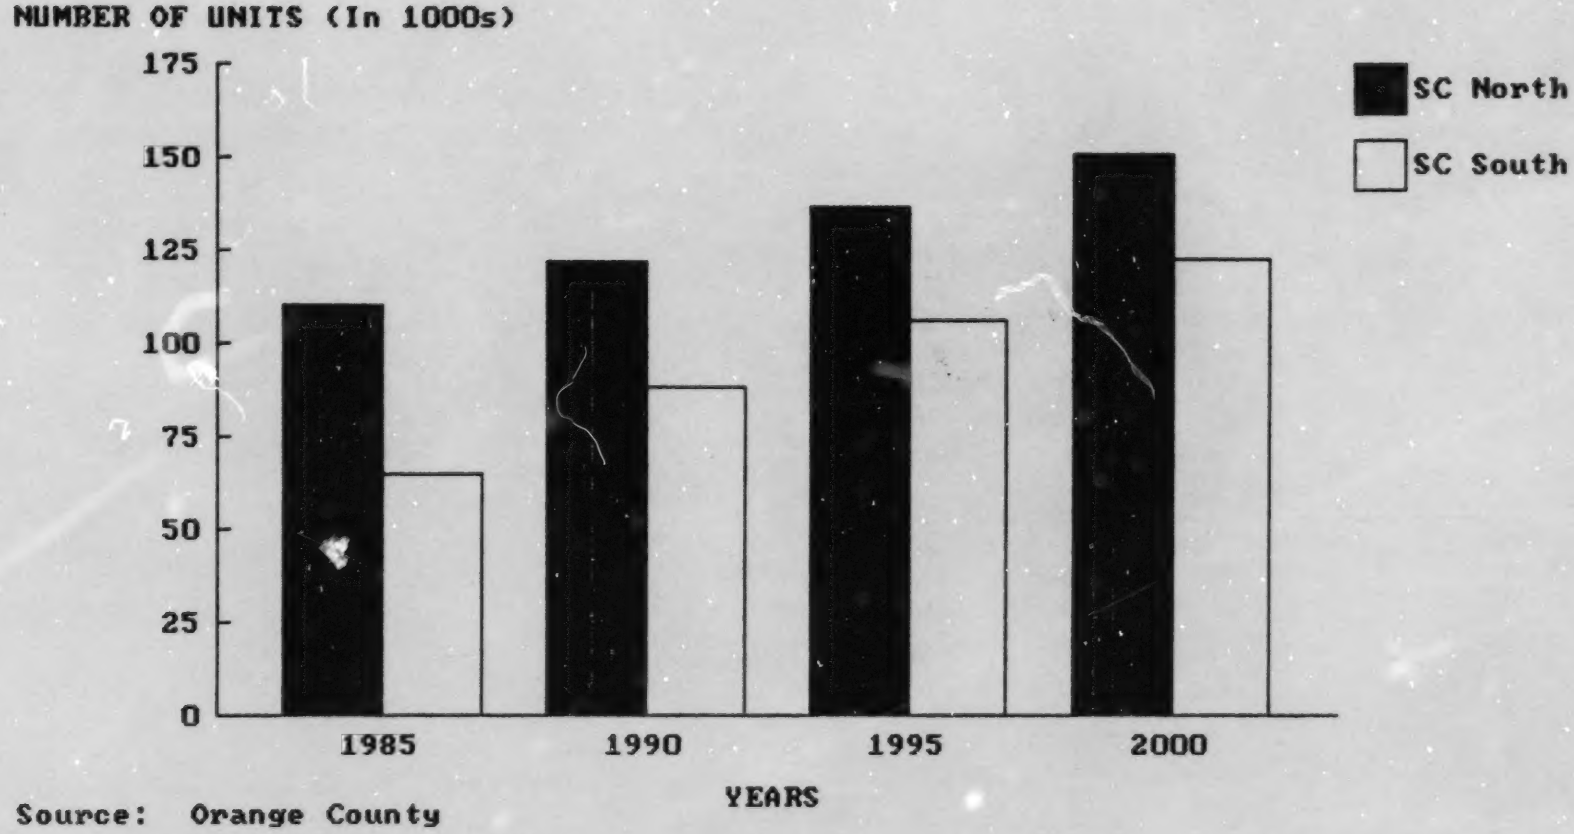
FIGURE 15

SADDLEBACK COMMUNITY COLLEGE DISTRICT:
PROJECTED NUMBER OF SINGLE FAMILY AND
MULTIPLE FAMILY UNITS



Source: Orange County
Administrative Office,
April 1982

More than 6,000 units are anticipated in area 56 (Saddleback), and almost 11,000 are expected in area 63 (Moulton).

Overall, by the year 2000, construction of approximately 25,000 single family units is expected in the north area; construction of approximately 31,000 single family units is expected in the south area. Construction of multiple family units will increase by approximately 34,000 in the north area and by 51,000 in the south area.

Enrollment at Saddleback College (Fall 1984)

Total enrollment for the fall 1984 semester at Saddleback College was 23,240. Of that total, 22,164 (95.4 percent) students resided within a Zip Code Area (see Figure 16) lying within the geographic boundary of the Saddleback Community College District (see Table 8). Of the students residing within the District, 4326 (19.5 percent) attended Saddleback College North; 16,669 (75.2 percent) attended Saddleback College South; and 1169 (5.3 percent) attended both campuses. Enrollment for the fall 1984 semester by age and WSCH for each Zip Code Area is presented in Appendix B.

The WSCH generated during the fall 1984 semester by students residing within a Zip Code Area within the District's geographic boundary was 174,701.75 (see Table 9). Of that total, 29,754.19 (17 percent) was generated by students attending Saddleback College North; 132,717.13 (76 percent) was generated by students attending Saddleback College South; and 12,120.43 (6.9 percent) was generated by students attending both campuses.

Summary

The population of Orange County, 2.1 million in 1985, is projected to increase to 2.6 million by 2000. The fastest growing area, the southern part, is served by the Saddleback Community College District.

Between 1980 and 1990 in Orange County, the population in the following age ranges is expected to experience marked increases: 30-34, 35-39, 40-44, 45-49, and 65+. Sharp decreases, however, are expected in the 15-19 and 20-24 age ranges. (Approximately 300 fewer students from the latter age ranges enrolled during the fall 1984 semester than enrolled during the fall 1983 semester.) Since students in the latter age ranges account for approximately 55 percent of the College's WSCH, such decreases may negatively impact the College's future financial well-being.

During the fall 1984 semester, seventy-five (75) percent of the students enrolled at Saddleback College attended Saddleback College South; twenty (20) percent attended Saddleback College North. And five (5) percent attended both campuses.

Enrollment and WSCH at Saddleback College are projected to increase through 1993, though the actual WSCH for the fall 1984 semester (172,508) was significantly less than the projected WSCH (200,800).

The construction of single family and multiple family units within the geographic boundary of the District is expected to

steadily increase. By the year 2000, construction of approximately 25,000 (31,000) single family units is expected in the north (south) area of the District. Construction of multiple family units is expected to increase by approximately 34,000 (51,000) in the north (south) area of the District.
